

## Instructions

### Game Set Up

Follow instructions, to make game pieces in documents 1 and 2 (use paper, or card for added strength and sellotape can be a great substitute, instead of glue).

Fill in the invitation letter (use it as a prop in the game, or send it out as an invite).

Put some pencils, or pens out, for filling in the puzzles.

Put printout “Dinosaur Bones 1” and “Dinosaur Bones 2” in printout “Dig Site”.

**Optional treasure hunt** - have someone hide the game pieces, to make the game longer to complete. Make sure this person gives the rules to the players, for where the game area is and what areas are not included in the game i.e. cupboards, rooms etc, so players do not look in unnecessary places.

On printout “Password Input”, scan in the QR code with a phone, or visit the website with a phone, or a computer. Ensure the sound settings are correct on the phone, the Auto-Lock is turned off and screensaver mode is turned off for computers. Press play on the video to start the game.

### During The Game

If you get stuck, look at the clues and answers document.

### Game Completion Tasks

Once the password has been entered correctly and you have escaped, play the video that appears.

**Optional game completion sign** - Fill in the printout “Game Completion Sign”, detailing time completed in and take photos with it.

**Dear**

**I am writing to tell you that I have finally completed my lifelong work.**

**I have made a time machine that uses quantum entanglement, to entangle itself and time travel to random time periods. The only way to untangle it self and to time travel to another time period, is to figure out what information it is entangled to.**

**I am currently looking for test subjects to trial it out and I thought of you.**

**If you think you are brave enough and are looking for a change of scenery, please visit:**

**Date:**

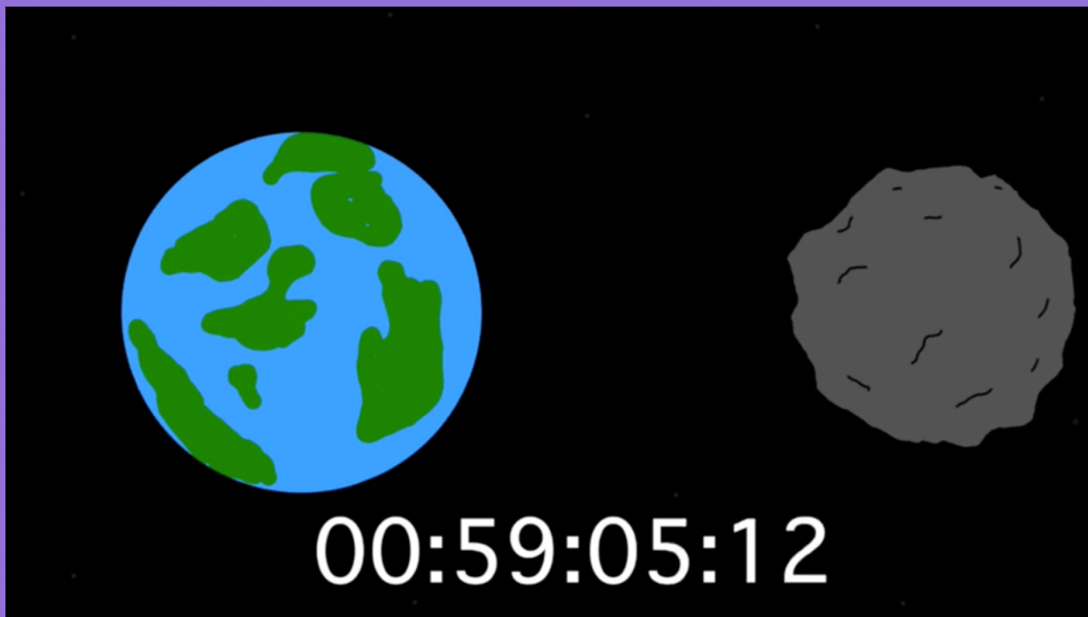

**Time:**

**Address:**

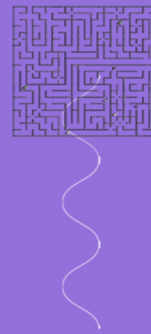

**Kind Regards**

**Ian Shomroc**

## Current Date

19/08/65,997,978 BC

### Time Period Information

Mesozoic Era - Age of the dinosaurs

Triassic Period

252,167,978 BC to 201,297,978 BC

Jurassic Period

201,297,978 BC – 144,997,978 BC

Cretaceous Period

144,997,978 BC – 65,997,978 BC

Cretaceous–Paleogene Extinction Event

65,997,978 BC

# WARNING!

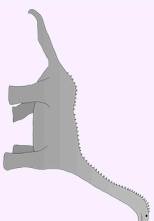

Cretaceous–Paleogene Extinction Event imminent

Be careful of the carnivores,  
with their sharp teeth or claws!

## Cretaceous Dinosaurs

### Alamosaurus

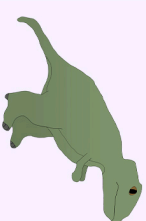

Name meaning: Ojo Alamo lizard.  
Diet: Herbivore (eats plants).  
Length: up to 30 metres.  
Weight: up to 80 tonnes.  
Interesting fact: Partly covered in bony armour.

### Parasaurolophus

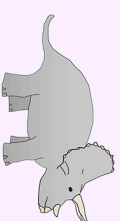

Name meaning: near crested lizard.  
Diet: Herbivore (eats plants).  
Length: up to 9.45 metres.  
Weight: up to 2.24 tonnes.  
Interesting facts: Head used for communication and advanced hearing.  
Able to walk on two and four legs.

### Tyrannosaurus rex

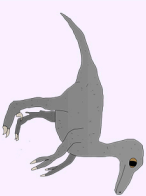

Name meaning: T-Rex. Tyrant Lizard King.  
Diet: Carnivore (eats meat).  
Length: up to 12.4 metres.  
Weight: up to 7.62 tonnes.  
Interesting facts: A hunter and scavenger. Has a **t**ail of  
Likes to sleep after eating.

### Triceratops

Name meaning: three-horned face.  
Diet: Herbivore (eats plants).  
Length: up to 9 metres.  
Weight: up to 8.16 tonnes.  
Interesting fact: Uses horns as a weapon, as a display of dominance to other Triceratops, identification and attracting mates.

### Troodon

Name meaning: wounding tooth.  
Diet:  
Length: up to 2.4 metres.  
Weight: up to 50 kg.  
Interesting facts: A theropod, the same group of meat eating dinosaurs that birds in the twenty-first century evolved from. One of the cleverest and smallest of dinosaurs.

## Cretaceous Creatures

### Pterodactylus - Pteranodon

Name meaning: winged toothless.  
Diet: Piscivore/ (Fish and  
Length: up to 2.6 metres.  
Wingspan length: up to 5.6 metres.  
Weight: up to 35 kg.  
Interesting facts: A species of pterosaur. The species were coined the name Pterodactyl. A flying reptile. Not a dinosaur. Has a habit of building precarious nests that fall out of trees.  
Eggs have spotty patterns on them.

### Belemnitidia

Name meaning: a dart.  
Diet:  
Length: up to 3 metres.  
Interesting facts: Has 10 hooked arms, with 100-800 hooks.  
used for catching its prey. Has an ink sack used for escaping predators.

### Teleosts

Name meaning: complete bone.  
Diet: Carnivore (eats meat), Herbivore (eats plants),  
Ornivore (eats plants and meat),  
Detritivorous (eats decomposing organic matter/ water cleaning).  
Length: up to 4.26 metres.  
Weight: up to 2.26 tonnes.  
Interesting facts: ninety six percent of all species of fish that exist in the twenty-first century are of the teleosts species.  
Have been around and evolved from the Paleozoic era.  
Teleosts are bony fish that can protrude their jaw, to aid them in feeding. They have symmetrical tails.

## Jurassic Period Dinosaur Bones

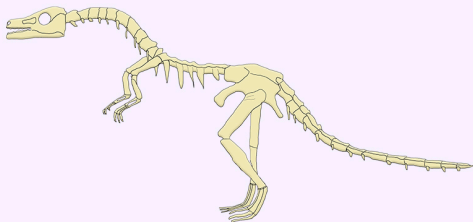

In order of size

### 1 Archaeopteryx

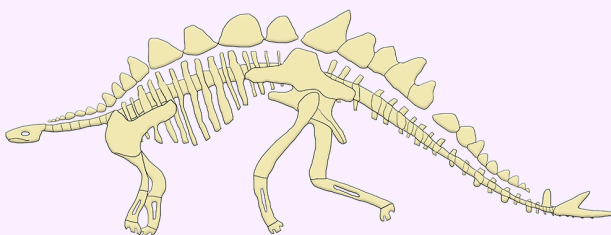

Length: up to 0.5 metres

### 2 Compsognathus

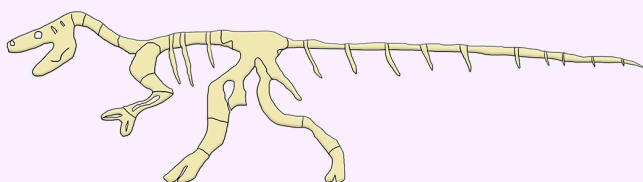

Length: up to 1.4 metres

### 3 Stegosaurus

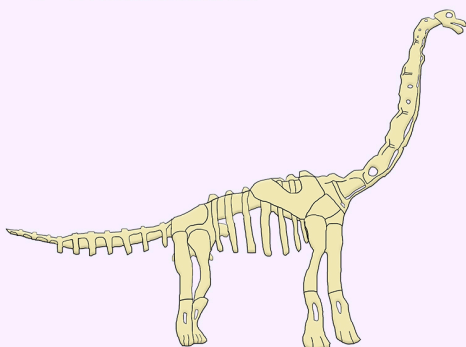

Length: up to 7 metres

### 4 Allosaurus

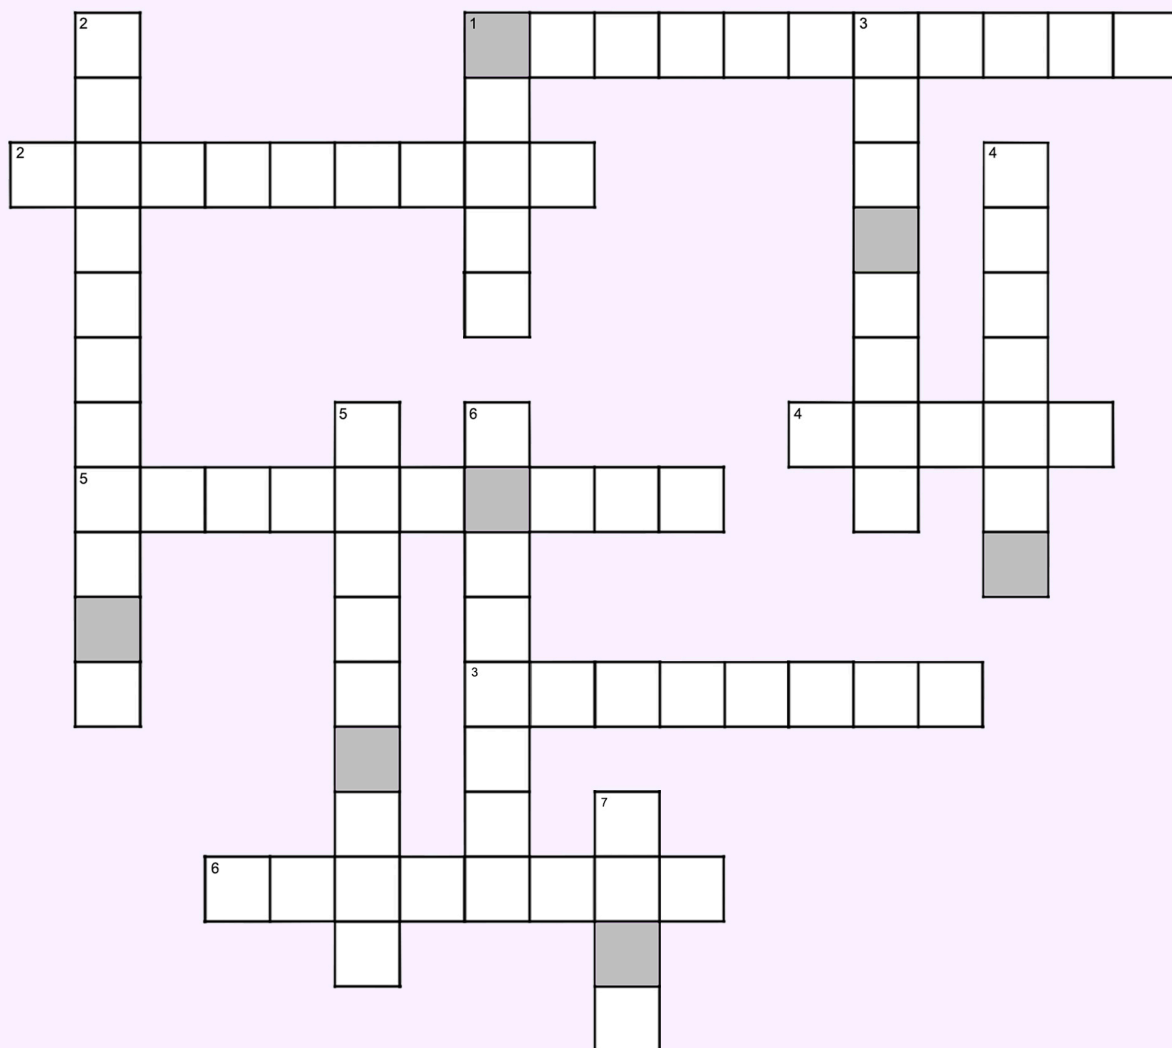

Length: up to 9.7 metres

### 5 Brachiosaurus

Length: up to 22 metres

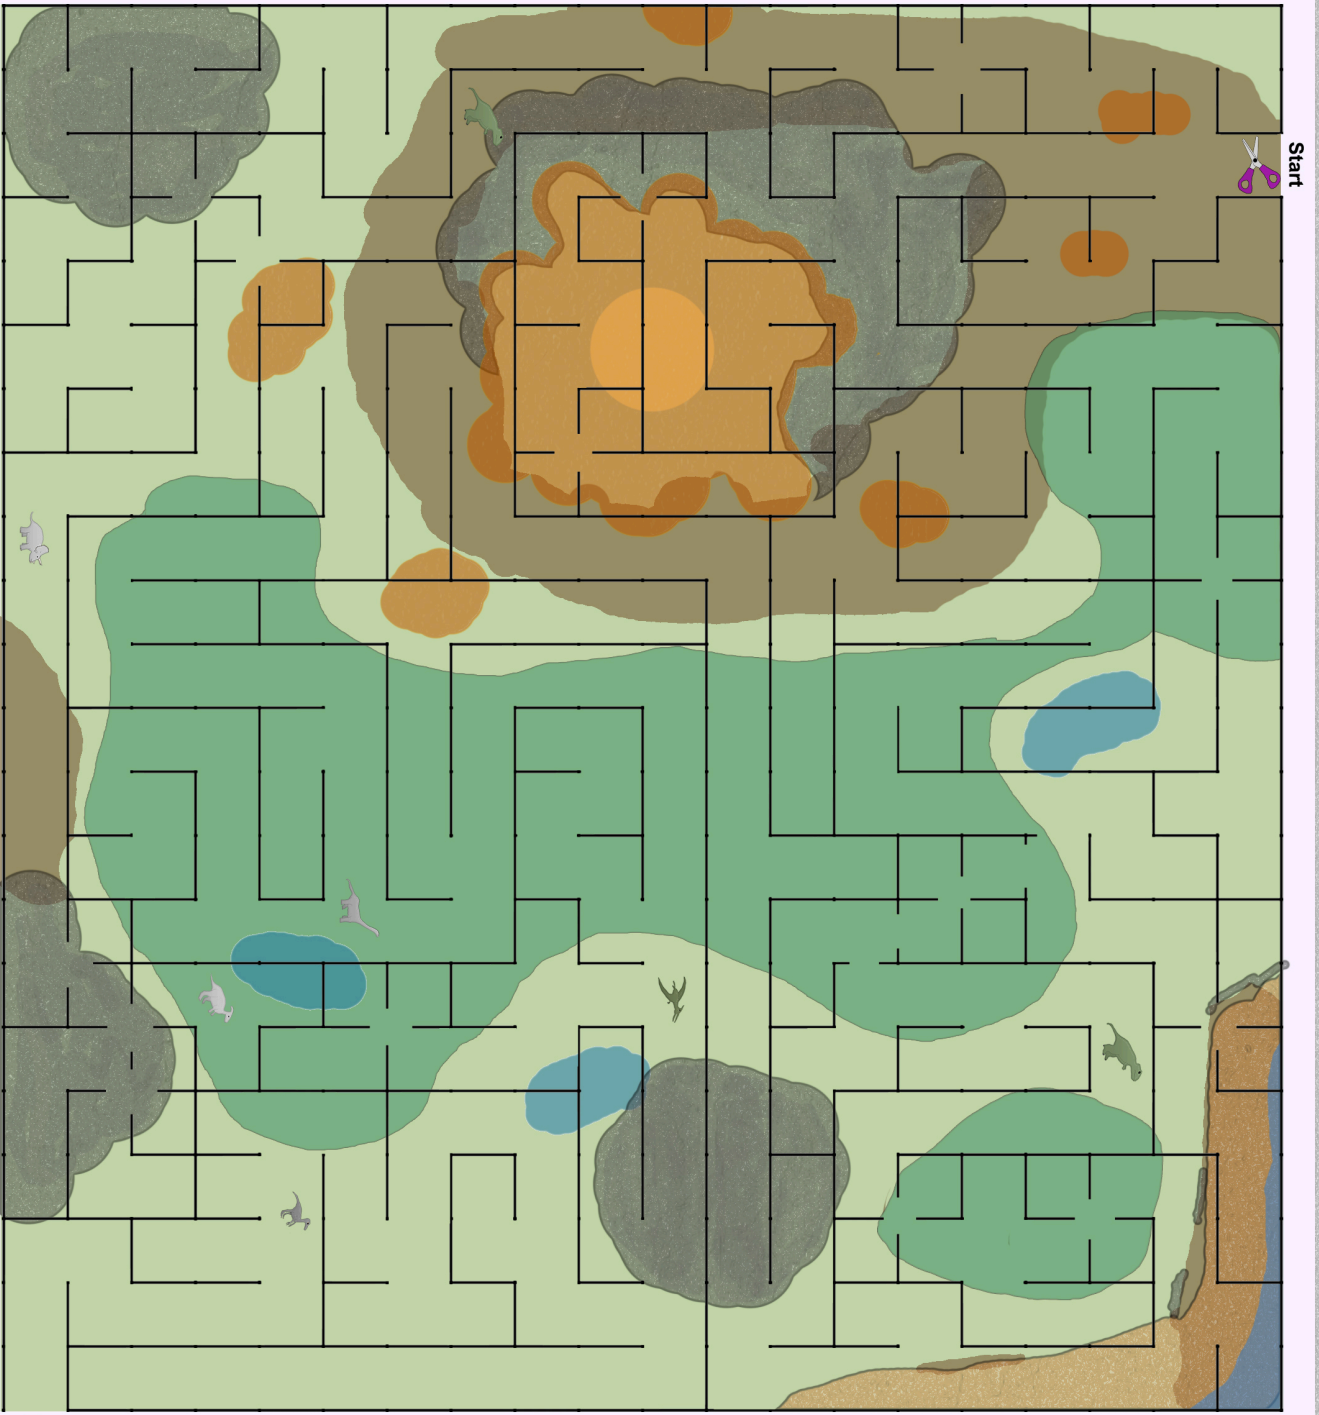

### Across

1. A dinosaur with three horns
2. Eats plants
3. The diet of a Troodon
4. Dinosaurs that survived and evolved into the twenty-first century
5. Most dinosaurs died out at the end of the \_\_\_\_ Period
6. The second period of the Mesozoic Era

### Down

1. The Tyrant Lizard King
2. A flying Pterosaur
3. How most of the dinosaurs went extinct
4. One of the most intelligent dinosaurs
5. Pterodactylus are a Piscivore and a \_\_\_\_\_
6. A type of Cretaceous fish that still exists in the twenty-first century
7. Belemnitida eat \_\_\_\_\_
