Chess Rules

How To Win

Get the opponents King piece in check and declare check mate. This is when the opponents King can be taken and no other moves can be made to protect it. Protect it by either blocking the attack with another piece, or by moving it to safety.

Piece Movement

PAWN - Moves one square forward per turn, except for their first when it can move two. Can only capture other pieces diagonally to its front. Once it reaches the other side of the chessboard, it can be promoted to either a Queen, Bishop, Rook, or Knight.

ROOK - Moves unlimited squares horizontally or vertically.

KNIGHT - Moves in an 'L' shape two squares horizontally, and then one square left or right. The Knight is the only piece, able to jump over other pieces.

BISHOP - Moves unlimited squares diagonally.

KING - Moves one square in any direction.

QUEEN - Moves unlimited squares in any direction.

Game Start

Choose who will be black and who will be white. White goes first, then take it in turns.
